

15th Anniversary of the founding of Mechatronics Department

Congratulatory address to the memorial party

This congratulatory address is sent to everybody whom graduated from Mechatronics Engineering department of Pathumwan Institute of Technology in Thailand, and contributes to society until nowadays for congratulation.

The technology of Mechatronics was developed in Japan that took the lead of the world in 1980 for indispensable technology to the labor and energy conservation in production. In 1973 and 1978, twice times of the oil crisis influence were obtained and the great trial to "Japan's postwar rehabilitation" was given. To toward this trial, Mechatronics engineering was begun by the young engineer in Japan and difficult confrontation. This technology that had arisen in Japan was wonderful and all-out development competition by advanced Western Europe country to the one home country. Thailand is also; because everyone of the Ministry of Education was early focus to promote the young engineer at that time and felt the necessity of the foundation of the Mechatronics engineering department. By cooperation with the Ministry of Education Science and Culture of Japan, and to be made the center of this technology was decided in Bangkok which was the center of Southeast Asia. The Department of Mechatronics of Pathumwan Institute of Technology was built under passion of two countries between Thailand and Japan.

At present, the result of the monetary policy passes of United States economy again, the world's economy is in the great tribulation. To get over this crisis, the nation is necessary to make cooperation and forward a policy for optimization priority problem of an industrial policy. The one requested engineer should aim at achievement thorough of resource and energy conservation. To achievement the steady productive technology, the biggest problem should be solved by Mechatronics engineering.

Everybody who relates to the Mechatronics engineering department located at the center of the whirlpool and now, how you effort to bright future of Thailand through the development of a new Mechatronics technology or an important problem is given. Possibility of graduated students who forget the life from foundation started Mechatronics technology at Pathumwan Institute of Technology until now.

Today is the day of the pleasure that the 15th anniversary of the Mechatronics engineering department foundation should be commemorated. In this opportunity, on again, reflect to the importance of the Mechatronics technology and let's make a vow bright future of Thailand.

Today, heartfelt congratulations, for the first project leader when founding stated, it is a litter opportunity to say "Congratulation" from my mind and finally, Really congratulations.

Mori Inosuke

First leader of Japanese side of
Mechatronics engineering department project

April 4th, 2009
